Introduction to AI Project Paper

Project Title:

Student list:

Full name	Group

(This will be your paper cover page. The abstract will start on a page of its own but will immediately be followed on the same page by the Introduction section.)

Abstract

Provide a brief overview of the project to introduce the reader to your report.

Keywords: Select 5 keywords that collectively best describe your work. (Look at internationally published papers to see what authors do.)

Abstract	1
Introduction (1 page max).....	1
State of the Art (1 page max)	2
Data Set Building (1.5 pages max).....	4
Problem Solving techniques (2 pages max).....	5
Application Design (2.5 pages max)	8
Results and Analysis (2.5 pages max)	10
Discussion (1 page max)	12
Conclusion (0.5 pages max).....	13
References.....	13
Appendix A: A few screen shots of your system with one brief sentence explaining each.....	
Appendix B: State who did what in the project?	

PENALTIES WILL APPLY IF YOU EXCEED THE TOTAL NUMBER OF PAGES MENTIONED ABOVE. THE ABOVE LIMITS DO NOT APPLY TO THE REFERENCES AND APPENDICES.

Introduction (1 page max)

A brief introduction to the project problem you are addressing. This means contextualising the problem, motivating for it, saying why it is important, its benefits, etc.

State of the Art (1 page max)

Explain what has been done by the R&D community. In particular, try to present any similar applications if they already exist and what their strengths and weaknesses are, and very briefly how your solution presents novel aspects. (You may wish to leave this last comparison till the very last discussion in your paper in which case it will be more substantial. You will judge where to best do it, if at all.)

Data Set Building (1.5 pages max)

This section details the dataset you have used in the project. How did you collect it and what preprocessing have you done to it, if at all? Also present the characteristics of your dataset, summary statistics, and visualisation. You may need to add any other details as you see relevant.

Problem Solving techniques (2 pages max)

Briefly explain which techniques you have used to solve the project problem and what specific design decisions you have taken to do so. You do not need to explain these techniques since we all know them. However, you will need to explain the problem formulation and why it was decided so, representation of a state/individual, objective/fitness function, etc.

Application Design (2.5 pages max)

Present your application architecture and its different modules as well as the technologies used for the implementation of the backend and frontend.

Results and Analysis (2.5 pages max)

Present the evaluation methods and performance metrics used followed by the performance evaluation of the various techniques with comparisons wherever possible, along with visualizations and key insights and conclusions derived from the results.

Discussion (1 page max)

Interpret the results, discuss limitations and potential improvements of your work, and outline future work.

Conclusion (0.5 pages max)

Summarize the key findings, contributions, and implications of the project.
